

BEYOND THE BASICS: Can Ultraviolet (UV) Room Disinfection Improve Patient Outcomes?

Webinar Presenter:
Ashish Mathur, Ph.D.
Vice President, Innovation and Technology
UVDI, Inc.
Valencia, CA

OVERVIEW

As hospital systems continue to combat Covid-19 while preventing the transmission of other healthcare-associated infections (HAI), ultraviolet (UV) room disinfection can be a valuable tool to improve patient outcomes. To achieve the maximum benefit from UV room disinfection, a proven, effective UV device must be implemented properly. This program will review the core elements of an effective UV disinfection program including current information on the challenge of preventing HAI, current evidence related to true UV device efficacy, and (3) best practices for efficient UV application and implementation. Key in-facility use sites, the value of a multidisciplinary collaboration, and device utilization metrics will also be discussed. The goal of this webinar is to help healthcare professionals achieve better patient outcomes using UV room disinfection.

OBJECTIVES

After completing this continuing education activity, the healthcare practitioner should be able to:

1. Summarize the current state of healthcare-associated infections (HAI).
2. Review key evidence of the effectiveness of ultraviolet-C (UV-C) disinfection against multi-drug resistant organisms (MDRO) and HAIs.
3. Discuss best practices for implementation of UV-C application across cross-functional teams.

INTENDED AUDIENCE

The target audience includes infection preventionists, nurses and other healthcare professionals who are interested in learning more about enhanced environmental hygiene and ultraviolet disinfection devices.

ACCREDITATION INFORMATION

California Board of Registered Nursing

Association of periOperative Registered Nurses is provider-approved by the California Board of Registered Nursing, Provider Number CEP 13019 for **1.0 contact hour**.
