

# A Novel Environmental Hygiene Intervention to Address CRE in High-Risk Patient Units

Webinar Presenter:  
**Dr. Warren Lowman**  
Clinical Microbiologist & IPC Specialist  
Wits Donald Gordon Medical Centre  
Johannesburg, South Africa

**Date:** 21st September 2022  
**Time:** 1:00pm (CEST, SAST)  
**Length:** 1 hour  
**Format:** Webinar  
**Complimentary**  
**Registration Link:** [Register Here](#)

## OVERVIEW

As hospitals globally combat the risk posed by multidrug-resistant organisms (MDRO), enhanced environmental hygiene can be a valuable addition to a comprehensive Infection Prevention bundle. In this educational webinar, Dr. Warren Lowman, Clinical Microbiologist & Infection Prevention and Control Specialist, Wits Donald Gordon Medical Centre (WDGMC) in Johannesburg, South Africa, shares his Team's successful novel environmental hygiene intervention, including the implementation of UV-C room decontamination technology in five high-risk patient units (including critical care, oncology, transplant and gastrointestinal surgery rooms), to address Carbapenem-resistant Enterobacterales (CRE).

Dr. Lowman will review a thorough summary of his Team's initiative, including study design, protocols, keys to implementation and close collaboration with Facility administration. The WDGMC Team's 26-month study was published in the March 2022 issue of [The Journal of Hospital Infection](#).

## OBJECTIVES

After completing this educational webinar, the healthcare practitioner should be able to:

1. Describe core elements of clinical study design, as utilized in a peer-reviewed, published intervention
2. Assess key factors to successfully implement UV room disinfection in their own facility
3. Review best practices to collaborate closely with Facility administration on a comprehensive and novel environmental hygiene intervention
